There are, of Course, Other Causes of Hemorrhoids

Any activity that puts excess pressure on the belly and rectum blood vessels can cause hemorrhoids. If you are pregnant, or if you sneeze or cough frequently, exercise too much, lift weights, or stand or sit down too long, these conditions can lead to hemorrhoids. If you couple these conditions along with a poor diet, then you increase the probability of hemorrhoids. Look at these types of numerous activities you do to make adjustments to their frequency.

Constipation is Generally the Cause of Hemorrhoids

For those who have infrequently bowel movements or have to strain to have them, then this sets up the conditions to create hemorrhoids. When you strain to have a bowel movement, you cause blood in order to congest in the rectum. This blood congestion brings about an increase in pressure in the belly and anus veins and also over time these veins balloon away, changing into hemorrhoids. Pressure in the abdomen blocks the return of blood from the rear end.
